Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Allowable Subject Matter

- 2. Claims 1-16 are allowed.
- 3. The following is an examiner's statement of reasons for allowance:
 - With respect to claims 1-8 none of the references, either individually or in combination, teach or fairly suggest a tone display voltage generating device, which includes reference voltage generating means for generating tone display voltages of different levels according to the number of bits of display data, and selecting means for selecting a voltage from the tone display voltages of different levels according to the display data so as to output the selected voltage to a tone display element, the tone display voltage generating device comprising at least one buffer means with a lower output impedance with respect to the reference voltage generating means; switching means for switching a state of connection between an output stage of the reference voltage generating means, the buffer means, and an input stage of the selecting means, so as to select whether to utilize the buffer means or not when outputting the tone voltages from the reference voltage generating means to the selecting means; and *first control means for controlling switching operations of the switching means according to a state of tone display of the tone display element*, the at least one buffer means, the switching means, and the first

control means being provided between the output stage of the reference voltage generating means and the input stage of the selecting means.

• With respect to claims 9-16, none of the references, either singularly or in combination, teach or fairly suggests a tone display voltage generating device which includes reference voltage generating means for generating tone display voltages of different levels according to the number of bits of display data and selecting means for selecting a voltage from the tone display voltages of different levels according to the display data so as to output the selected voltage to a tone display element; the tone display voltage generating device comprising at least one voltage generating device comprising a lower output impedance with respect to the reference voltage generating means, for generating the tone display voltages of different levels; switching means for selecting whether to output the tone display voltages of different levels from the reference voltage generating means to the selecting means, or from the voltage generating means of a lower output impedance to the selecting means; and control means for controlling switching operations of the switching means according to a state of tone display of the tone display element.

Sano, US 5,376,926, teaches a liquid crystal driver utilizing a buffer circuit.

Kuwata et al., US 5,489,910, teaches a method of driving display device and having a buffer between reference voltage generator and driver IC.

Tetsuya et al., JP 08-082783, teaches gradation voltages supplied to the liquid crystal display device through buffers.

Application/Control Number: 09/974,910

Art Unit: 2674

None of the above teaches or fairly suggests a tone display generating device as claimed by the invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
